The drawings are objected to because the lead lines for reference numerals such as 50 in Fig. 2A do not connect to the corresponding elements. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claims 1-11 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Throughout the claims, "low" and "high" are vague because it is not clear what they are relative to.

Art Unit: 3654

For clarity and/or definiteness, it appears that ~~each~~ should be inserted before "said" (claim 1, line 22) and after "between" (claim 1, line 36), that ~~body~~ should be inserted after "intermediate" (Claim 1, line 36), that "channel" (claim 3, line 4) should be in the plural, that "finer" (claim 5) should be ~~fiber~~.

The following appear to lack sufficient antecedent basis (in the claim): "fiber tube" (claim 1), "said protective ends" (claim 1, line 29), "the shaft end" (Claim 1, line 37-38).

All claims should be revised carefully to correct all other deficiencies similar to the ones noted above.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Pretto et al (US 5379964). Note the fiber tube 12, rails 14, 16, and 18, gripping elements 32, "sliding strips" which can read on the outer surfaces of the rails, "protective end external sleeves" which read on the thick sections at each end of the main tube (near elements 46), and "inner sleeves" which read on portions of elements 38 positioned within the tube and extending toward the respective shaft end. It should be noted that all elements are eventually joined together. The rotational balance weights are deemed inherent in the rails and/or in elements 28.

Art Unit: 3654

Claims 2-11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims. The prior art of record does not show or render obvious an apparatus as recited in claim 2.
